1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kevin M. Donnelly (Reg No: 61,643) on 03/25/2008.

The application has been amended as follows:

In claims:

a. Following claims have been amended to recite as below:

Claim 22: A method for handling a communication in a network of nodes, each node having an associated identification that is unique from other identifications in the network of nodes, the method comprising:

receiving, at a first node, a communication from a second node,
wherein the communication includes an identification;

determining, at the first node, whether the identification included in
the communication is closer to, equidistant from, or further from a

predetermined identification value than an identification associated with the first node;

if the identification included in the communication is closer to the predetermined identification value than the identification associated with the first node, sending, from the first node to a third node, a communication including the identification that was included in the communication received from the second node ~~associated with the first node~~;

if the identification included in the communication is further from the predetermined identification value than the identification associated with the first node, sending, from the first node to a third node, a communication including the identification associated with the first node ~~that was included in the communication received from the second node~~; and

if the identification included in the communication is equidistant from the predetermined identification value as the identification associated with the first node, concluding that a loop exists in the network and appointing a node as a master loop breaker.

Claim 33: An apparatus for handling a communication in a network of nodes, each node having an associated identification that is unique from other identifications in the network of nodes, the apparatus

comprising:

one or more components to configured to:

receive, at a first node, a communication from a second node,
wherein the communication includes an identification;

determine, at the first node, whether the identification included in
the communication is closer to, equidistant from, or further from a
predetermined identification value than an identification associated with
the first node;

if the identification included in the communication is closer to the
predetermined identification value than the identification associated with
the first node, send, from the first node to a third node, a communication
including the identification that was included in the communication
received from the second node ~~associated with the first node~~;

if the identification included in the communication is further from the
predetermined identification value than the identification associated with
the first node, send, from the first node to a third node, a communication
including the identification associated with the first node ~~that was included~~
~~in the communication received from the second node~~; and

if the identification included in the communication is equidistant from
the predetermined identification value as the identification associated with
the first node, conclude that a loop exists in the network and appoint a
node as a master loop breaker.

Claim 44: An apparatus for handling a communication in a network of nodes, each node having an associated identification that is unique from other identifications in the network of nodes, the method comprising:

means for receiving, at a first node, a communication from a second node, wherein the communication includes an identification;

means for determining, at the first node, whether the identification included in the communication is closer to, equidistant from, or further from a predetermined identification value than an identification associated with the first node;

means for:

if the identification included in the communication is closer to the predetermined identification value than the identification associated with the first node, sending, from the first node to a third node, a communication including the identification that was included in the communication received from the second node ~~associated with the first node;~~

if the identification included in the communication is further from the predetermined identification value than the identification associated with the first node, sending, from the first node to a third node, a communication including the identification associated with the first node ~~that was included in the communication received from~~

~~the second node~~; and

if the identification included in the communication is equidistant from the predetermined identification value as the identification associated with the first node, concluding that a loop exists in the network and appointing a node as a master loop breaker.

b. Following claims have been canceled:

Claim: 29-32 (Canceled).

Claim: 40-43 (Canceled).

2. The following is an examiner's statement of reasons for allowance:
 - A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened

pursuant to 37 CFR 1.114. Applicant's submission filed on 10/28/2008 has been entered.

- The information disclosure statement (IDS) submitted on 10/28/2008 and 10/14/2008 was considered by the examiner.
3. Claims 22-28, 33-39, 44 are allowed over prior art. Claims 1-21, 29-32, 40-43 are canceled.
- The prior art fails to teach or fairly suggest the following limitations recited in independent claims 22, 33, 44 for method, apparatus and means,
 - “if the identification included in the communication is closer to the predetermined identification value than the identification associated with the first node, sending, from the first node to a third node, a communication including the identification that was included in the communication received from the second node;
 - if the identification included in the communication is further from the predetermined identification value than the identification associated with the first node, sending, from the first node to a third node, a communication including the identification associated with the first node;
 - and
 - if the identification included in the communication is equidistant from the predetermined identification value as the identification associated with

the first node, concluding that a loop exists in the network and appointing a node as a master loop breaker.”

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Venkatesh Haliyur whose telephone number is 571-272-8616. The examiner can normally be reached on Monday thru Friday 8:30AM to 4:30PM.
